

Team/Group	S2-CB-03 Group 1		
Date:	09/11/2021	Time:	13:00– 13:40
Minutes prepared by:	Soleil Umwiza	Location:	Open space 2.60 OIL
1. Purpose of the meeting			
. Ask questions . Feedback			
2. Attendance			
Lars Kluijtmans Esther Wolfs Mohammad Nazibul Khan Soleil Umwiza Michiel Koehorst			
3. Agenda			
Topic	Discussion		
Backup	you wouldn't set up this in the development environment, but in deployment environment. What we could do is run a script each night that triggers the back-up process, program runs and triggers back up. Make a separate script/application. Batch application, trigger at a certain time. Daily process/program that runs at a certain time. Operating system triggers program.		
Unit test	In this stage is not mandatory.		
Feedback	Better: functional requirements. FRs are complete, use cases are not FR 2 & 3, user account created by admin, FR22 & FR23: Make interface for scheduling, implement it so depot has access to depot schedule and sales manager has access to sales schedule. Use case refer to functional requirements Use case: no user interface specific language, use "right mouse click, view options" for example.
